IN THE CLAIMS

Claims 1-30 (canceled)

31. (new) A process comprising adding inorganic solids to a hydrocarbon-containing plastic and introducing the resulting mixture into a liquid melt.

32. (new) A process according to claim 31, wherein 90% of the inorganic solid have particle sizes of 0.01  $\mu\text{m}$  to 5 mm.

33. (now) A process according to claim 32, wherein 90% of the inorganic solid have particle sizes of 0.1  $\mu\text{m}$  to 2 mm.

34. (new) A process according to claim 31, wherein the proportion of inorganic solids in the plastic is 0.5 to 90 wt.%.

35. (new) A process according to claim 34, wherein the proportion of inorganic solids in the plastic is 2 to 70 wt.%.

36. (new) A process according to claim 31, wherein the inorganic solids are at least one solid selected from the group consisting of a titanium-containing substance, iron oxide, aluminum oxide, magnesium oxide, calcium oxide, a silicate, and a slag forming additive.

37. (new) A process according to claim 36, wherein the inorganic solids contain synthetic titanium dioxide.

38. (new) A process according to claim 31, wherein the plastic comprises nitrogen.

39. (new) A process according to claim 31, wherein the plastic used is old plastic.

40. (new) A process according to claim 31, wherein the plastic is mixed in solid form with the inorganic solids.

41. (new) A process according to claim 31, wherein the plastic is mixed in molten form with the inorganic solids.

42. (new) A process according to claim 41, further comprising cooling the mixture until the mixture solidifies to form a solidified plastic/flux mixture.

43. (new) A process according to claim 42, wherein the solidified plastic/flux mixture is ground or shredded.

44. (new) A process according to claim 31, wherein the plastic/flux mixture is introduced into the liquid melts by injection.

45. (new) A process according to claim 31, wherein the plastic/flux mixture is introduced into the liquid melts in the form of lumps.

46. (new) A process comprising mixing solid plastic with inorganic solids so that the inorganic solids adhere to the plastic surface to form a mixture, and the mixture is added to a liquid melt.

47. (new) The method according to claim 46, wherein the plastic is in the form of a granule, matrix agglomerate or pot agglomerate.

48. (new) The method according to claim 46, wherein the plastic is in the form of a plastic granule and the inorganic solids are added to the plastic during formation of said granules.
